General Surgery Devices Market Growth & Trends

The global general surgery devices market size is expected to reach USD 29.96 billion by 2030, registering a CAGR of 8.29% over the forecast period, according to a new report by Grand View Research, Inc. Increasing number of surgical procedures coupled with technological advancements is anticipated to drive the market. Moreover, increasing awareness and patient affordability for plastic or reconstructive surgeries would propel the number of procedures conducted. Technological advancements in the field of general surgery are considered key drivers of this industry. Several key players are investing in R&D for the launch of innovative products. For instance, the development of medical robots to assist surgeons is a key advancement in the field.

Medical robots offer several advantages, such as a 3D view of the operating field, reduced blood loss & transfusions, early discharge from the hospital, lower risk of infection, faster recovery time, minimal scarring, less trauma to the body & less postoperative pain, more precision in surgery due to the elimination of a surgeon's tremor. Furthermore, an increase in the number of road accidents, an aging population, and rising healthcare expenditure in emerging economies are also among the key factors expected to boost industry growth. The geriatric population is more susceptible to a vast number of diseases, which is likely to increase the need to treat the diseases effectively, thereby boosting industry growth. According to the U.S. Census Bureau,

healthcare spending worldwide is anticipated to increase to USD 18.28 trillion by 2040, growing at a CAGR of 2.6%.
