Abstracts

The global granulator machine market size was valued at USD 3.61 billion in 2025 and is projected to grow from USD 3.73 billion in 2026 to USD 5.22 billion by 2033, at a CAGR of 4.9% from 2026 to 2033. Asia Pacific dominated the market with the largest revenue share of 40.9% in 2025. The market is expected to grow significantly due to increasing demand from the pharmaceutical, plastics, chemical, food processing, and recycling industries.

Granulator machines are widely used for size reduction, material processing, and recycling operations to improve production efficiency and material handling. Rising plastic recycling activity and increased focus on waste management are driving demand for industrial granulation equipment.

In the pharmaceutical industry, granulator machines are widely used in tablet manufacturing and powder processing to improve material consistency, flow properties, and uniform mixing of active ingredients. Wet and dry granulation processes help produce granules with controlled particle size and density, supporting efficient tablet compression and dosage accuracy. Increasing pharmaceutical production and demand for high-quality solid dosage forms are driving greater adoption of granulator machines in pharmaceutical manufacturing operations.
