Abstracts

The global graphene-enhanced conductive polymers market size was estimated at USD 313.3 million in 2024 and is projected to reach USD 1,792.9 million by 2033, growing at a CAGR of 21.4% from 2025 to 2033. A growing driver is the shift toward miniaturized electronic components that require materials with higher conductivity at smaller thicknesses.

Graphene-enhanced polymers meet this need by delivering strong electrical performance while keeping devices lighter and more compact. The industry is shifting from single-function fillers to multifunctional graphene-polymer systems that combine electrical conductivity with mechanical reinforcement and thermal management. Adoption is rising across automotive, aerospace and electronics where lightweighting and miniaturization are priorities.
