High Level Disinfection Services Market Growth & Trends

The global high level disinfection services market size is expected to reach USD 42.12 billion by 2030, according to a new report by Grand View Research, Inc. The market is expected to expand at a CAGR of 7.30% from 2022 to 2030. The increasing prevalence of hospital-acquired infection and surgical site infections, the increasing number of surgeries coupled with the rise in the incidence of chronic disorders, and the impact of COVID-19 are the key driving factors for the market.

An increase in the prevalence of HAIs due to a lack of sanitation and preventive measures is a major factor expected to propel market growth over the forecast period. Unclean medical devices are a key source of hospital-acquired infections. According to the report published by CDC in 2017, hospital-acquired infections result in more than 99,000 deaths every year. Also, according to antimicrobe.org, HAP accounts for around 27.00% of all nosocomial infections acquired in medical intensive care units (ICU). Since these products are needed for disinfection and cleaning of various hospital equipment, therefore, these instances are expected to surge the demand for high level disinfectant services.

Furthermore, the sudden outbreak of COVID-19 across the globe is one of the major

factors propelling the market growth. According to the Worldometer estimates, as of 26th April 2021, there are total 147,884,279 cases globally. If more people become infected with the coronavirus, there will be a significant need for critical care supplies that will boost the demand for high-level disinfectant services. Furthermore, major players operating in the market are developing HLDs that are effective against COVID-19. For instance, LANXESS developed Rely+On Virkon and Solvay's PROXITANE, which is effective against the coronavirus. Hence, such instances indicate considerable market growth over the forecast period.

The hospitals and clinics segment held the largest revenue share in 2020. The segment growth is majorly driven by the increasing number of hospital-acquired infections and the rising number of people suffering from coronavirus

In Asia Pacific, the market is expected to witness the fastest growth rate over the forecast period owing to the rising prevalence of chronic disorders
