Abstracts

The global HVAC filters market size was estimated at USD 7,430.5 million in 2025 and is projected to reach USD 9,703.7 million by 2033, growing at a CAGR of 3.4% from 2026 to 2033. The global HVAC Filters Market is driven by increasing awareness about indoor air quality and its impact on health.

Rising levels of air pollution, allergens, dust, and airborne contaminants have encouraged households and businesses to adopt effective filtration systems. Commercial spaces such as offices, hospitals, and educational institutions are increasingly installing high-efficiency HVAC filters to maintain cleaner indoor environments.

Expansion of residential, commercial, and industrial construction activities is another key driver for the HVAC filters market. Rapid urbanization and infrastructure development are increasing the installation of HVAC systems in new buildings, particularly in emerging economies. Modern buildings are designed with integrated climate control systems that rely on efficient filtration to maintain performance and energy efficiency. As more buildings are constructed and existing structures undergo renovation, the demand for HVAC filters rises due to both initial installations and ongoing maintenance requirements.
