### Hydrocolloid Dressing Market Growth & Trends

The global hydrocolloid dressing market size is anticipated to reach USD 2.04 billion by 2030, registering a CAGR of 4.99% over the forecast period, according to a new report by Grand View Research, Inc. Increasing prevalence of chronic and acute wounds, rapidly aging population, rising number of diabetic patients, and surge in research and development activities are among the major factors driving the market growth. The rising prevalence of chronic wounds, such as diabetic foot ulcers and pressure ulcers, among the general population is likely to increase the number of patients getting treatment and fuel the adoption of hydrocolloid dressings.

Furthermore, the rising prevalence of acute wounds, such as surgical wounds and burns, is further expected to drive the demand for hydrocolloid wound dressings throughout the projected period. Surgical wounds, for example, are a major problem in general healthcare, according to the Wound Healing Society (WHS). Despite all attempts, Surgical Site Infections (SSI) cause death in 75% of patients globally. As a result, the increased incidence of infections has imposed a significant cost burden on the healthcare business. This is likely to contribute to the launch of advanced products, thus fostering market growth. Clinical uses for several hydrocolloid materials have been proposed in recent years.

## Hydrocolloid Dressing Market Report Highlights

The chronic wound application segment is estimated to dominate the market during the forecast period

On the basis of end-uses, the hospital segment dominated the market in 2021. The segment's dominance is attributed to the increasing number of patient admissions for wound injuries and the developing healthcare infrastructure

North America dominated the market in 2021 owing to the strong presence of key players and high healthcare expenditure

Extensive research is now being conducted to study the effectiveness of hydrocolloid dressings. Companies are extensively spending on R&D and are always working on achieving excellent clinical trial outcomes

For instance, in January 2021, a clinical trial, "Effect of Evidence-based Skin Care & Hydrocolloid Dressing in the Prevention of Nasogastric-related Pressure Injury", was conducted, which was sponsored by MAIDE YESILYURT, Necmettin Erbakan University

Thus, robust clinical studies to commercialize innovative hydrocolloid dressing products are expected to drive the growth of the market during the projected period
