### Immune Health Supplements Market Growth & Trends

The global immune health supplements market size is expected to reach USD 132.0 billion by 2028, according to a new report by Grand View Research, Inc. The market is expected to expand at a CAGR of 11.3% from 2021 to 2028. The growing prevalence of various infectious diseases caused by several micro-organisms, such as bacteria, fungi, viruses, and parasites, coupled with the rising demand for supplements to increase the body's immune system, is expected to boost the immune health supplements adoption across the globe. Besides, increasing adoption of immunity-boosting products due to the COVID-19 pandemic is also anticipated to accelerate the market growth over the forecast years. According to the Council for Responsible Nutrition (CRN) report in 2020, the consumption of dietary supplements among Americans was about 73 percent. However, taking dietary supplements among individuals for immune health has been increased from 27 percent to 32 percent from 2019 to 2020.

As of 2020, the vitamin and mineral supplements segment held the largest revenue share. The increasing adoption of vitamin C, D, multivitamins, and minerals resulted in a high revenue share for the segment in the market. An unhealthy diet limited physical activity, and a sedentary lifestyle are the key factors responsible for increasing vitamin and mineral intake to improve an individual's immunity, especially in the developed

regions such as North America and Europe. However, the increasing patient population and growing awareness for vitamin and mineral consumption are the major factors expected to boost market growth in emerging economies such as Asia Pacific and Latin America during the forecast period. However, the herbal supplements segment is also anticipated to be the second-largest product segment due to its popularity for long-term consumption as immunity boosters without any side effects.

By form, the tablets segment accounted for the largest revenue share in 2020. Due to its longer shelf life and high preference of adoption among the individual's tablets segment is expected to be the dominated segment. Tablets are more stable than the capsule, particularly in moist environments. In addition, tablets are largely manufactured by the key market players than the other form of supplements. Further, properties of tablets such as durability, inexpensive, can be split into two parts, and higher dosage accommodation is anticipated its high adoption and maximum value share in the market.

The respiratory tract infection segment held the largest revenue share in 2020. Due to the increasing prevalence of respiratory disorders such as COPD, asthma, COVID19, immune health supplements adoption has increased in the last couple of years. Particularly, the rapid rise in life-threatening coronavirus disease from the last year has increased the adoption of immunity-boosting products to manage respiratory tract infections. Taking supplements such as Vitamin C, D, and minerals such as zinc and probiotics offers unique properties to reduce the risk of respiratory tract infection, duration, and severity of infection.

As of 2020, the self-medication segment accounted for the largest revenue share than the prescription-based segment. It can be attributed due to the high percentage of self-medicated supplements using the population around the globe. Further, most of the vitamins and mineral supplements do not require a prescription. One can purchase them from pharmacies, groceries, and any convenience stores. Besides, the growing awareness among the individuals to use immunity-boosting products due to COVID19 is also expected to provide a high market share to the self-medication segment over the forecast years globally.

The pharmacies/drug stores segment dominated the market and accounted for the largest revenue in 2020. The availability of a wide variety of products and the high preference of consumers to buy immune health supplements from pharmacies are the factors responsible for the largest market share of this segment. Moreover, the availability of both prescriptions based and over-the-counter products for the consumers

is also expected to accelerate the growth of the Pharmacies/drug stores segment over the forecast years.

North America dominated the market and accounted for the largest revenue share in 2020. The increasing prevalence of various health disorders, increasing usage of immune-enhancing products, and high spending capacity by the consumers are the factors anticipated to provide the majority of market share to the region. However, Asia Pacific countries, such as China, India, and Japan, are expected to witness significant growth over the forecast years due to the large population, increasing awareness, and growing consumer base in these countries.

### Immune Health Supplements Market Report Highlights
