### India Dental Implants Market Growth & Trends

The India dental implants market size is expected to reach USD 333.4 million by 2030, expanding at a CAGR of 12.6% over the forecast period, according to a new report by Grand View Research, Inc. The market is expected to grow owing to the rising geriatric population, an increase in the prevalence of dental disorders, increased demand for cosmetic dentistry, and increased use of CAD/CAM technologies. Indians are largely affected by tooth decay, dental caries, periodontal disease, and oral cancer. According to the Indian National Oral Health Survey, 90% of people have oral diseases, and most dental consultations are for the treatment of dental disorders such as tooth loss, gum infection, decay, loosening of teeth, and vascular damage.

According to a survey by Clove Dental, the COVID-19 pandemic caused a sharp drop in dental appointments in India. The pandemic led to a 63.7% decline in preventative care due to fewer patients visiting dental clinics. For instance, across India, patient visits during the first quarter of the pandemic in June 2020 reached 9,549. This is a significant decrease from the 45,979 visits in June 2019. Similar to this, it was 13,784 in July 2020 and 23,591 in October 2020.
