## **Abstracts**

The Indonesia personal protective equipment market size was estimated at USD 1,009.0 million in 2024 and is projected to reach USD 2,137.9 million by 2033, growing at a CAGR of 8.7% from 2025 to 2033. The market is expected to grow due to rising workplace safety awareness, stricter government regulations, and expanding industrial activities.

Manufacturing, construction, mining, and healthcare sectors are increasingly prioritizing worker protection, driving higher demand for products such as helmets, gloves, masks, protective clothing, and safety footwear. The country's ongoing infrastructure development projects also require extensive personal protective equipment (PPE) usage, further boosting consumption.

In addition, post-pandemic habits have sustained demand for medical and hygiene-related PPE. Local production capacity is improving as manufacturers invest in better technology and quality standards, reducing reliance on imports. Together, these factors support consistent market expansion over the next several years.
