Inhaled Nitric Oxide Delivery Systems Market Growth & Trends

The global inhaled nitric oxide delivery systems market size is estimated to reach USD 434.2 million by 2028 registering a CAGR of 6.9%, according to a new report by Grand View Research, Inc. A rise in the cases of respiratory failure among neonates, increased pollution levels leading to lung diseases in adults, need for quick treatment response, and reduced complications are the factors driving the adoption of inhaled nitric oxide therapy. The presence of several small-scale manufacturers and research initiatives undertaken by major players to prove treatment efficacy against the SARS-CoV-2 virus further enhances market growth.

Safe and effective treatment regimen, a rapid offset of action, reduced toxicity, high concentration of drug at the target organ, avoidance of systemic adverse reaction, and reduced dose of medication are some of the advantages of INO over other medications. This leads to the improved adoption of INO, potentially driving the market growth. Market leaders like Mallinckrodt Pharmaceuticals are providing fundings to conduct clinical trials of INO therapy to treat complications in COVID-19 patients. Such initiatives are said to boost the market growth during the forecasted period.
