Abstracts

The global investigator payment management solutions market size was estimated at USD 492.02 million in 2025 and is projected to reach USD 1338.1 million by 2033, growing at a CAGR of 13.5% from 2026 to 2033. Rising investments in clinical research and biopharmaceutical R&D drive market growth.

According to the IQVIA Institute's Global Trends in R&D 2025, total R&D expenditure by large pharmaceutical companies reached about USD 190 billion in 2024, up from USD 163 billion in 2023. This increase reflects the growth in the number, scale, and geographic spread of clinical trials. The expansion creates strong demand for efficient financial management systems to handle complex investigator payments, site reimbursements, and multi-country financial operations.

Moreover, increasing investments in emerging markets such as India and other developing regions are accelerating clinical trial activity, creating a greater need for streamlined payment processes. As trials expand across multiple sites and geographies, companies face challenges with multi-currency transactions, tax compliance, and regulatory requirements. These challenges drive the adoption of automated investigator payment management solutions. In addition, strategic collaborations and large-scale investments by biopharmaceutical companies further drive clinical development activities. For instance, in January 2026, Bristol Myers

Squibb entered a collaboration with Janux Therapeutics worth up to USD 850 million for cancer drug development. Such collaboration increase trial complexity, driving demand for advanced payment management solutions to ensure efficient financial workflows and compliance.

The growing adoption of integrated clinical and financial systems is significantly driving the investigator payment management solutions industry, as sponsors and CROs increasingly prefer unified platforms to streamline trial operations and financial workflows. Integrated eClinical platforms combine CTMS, EDC, ePRO, and payment functionalities, enabling seamless data flow, reducing manual intervention, and improving payment accuracy and transparency. This enhances operational efficiency and ensures faster, error-free investigator payment processing across global trials.

For instance, Mednet Solutions Inc. offers the iMednet eClinical platform, an EDC-centric solution that integrates multiple native modules such as CTMS, Payments, eConsent, RTSM, and eTMF within a single system. These integrated modules enable sponsors and CROs to manage clinical workflows and investigator payments in a unified environment, improving visibility, reducing errors, and enhancing study efficiency across all phases of clinical trials.
