Asia Pacific: Fastest growing market

The growing demand for the halal economy is driven by the increasing adoption of Shariah-compliant financial products and services that adhere to Islamic law, enabling investors to access ethical and interest-free investment opportunities. The adoption of Shariah-compliant digital banking and fintech platforms is expanding the use of modular, cloud-native solutions that enable Islamic financial products at scale. For instance, in May 2025, Tuum expanded its Islamic banking suite by introducing new cloud-native modules to enable financial institutions to offer Shariah-compliant banking solutions. The platform is designed to support both fully Islamic banks and conventional banks with Islamic banking windows, providing flexibility and scalability. It includes features such as Islamic deposit accounts (Mudarabah, Wakalah, Wadiah, and Qard Hassan), automated profit-sharing mechanisms, and Tawarruq-based financing solutions. Additionally, Tuum has partnered with DDCAP Group to enhance its capabilities in facilitating asset-backed, Shariah-compliant transactions through automated workflows.

The rapid digitalization of financial services is further accelerating the growth of the Islamic fintech industry. The adoption of mobile banking, digital wallets, and online investment platforms has enabled fintech providers to deliver Shariah-compliant solutions more efficiently and at scale. This digital transformation is particularly evident in emerging markets across the Middle East, Southeast Asia, and parts of Africa, where a large unbanked population is gaining access to financial services through fintech platforms. Technological advancements such as blockchain, artificial intelligence, and cloud computing are further enhancing the capabilities of Islamic fintech solutions.

The regulatory environment for Islamic digital banking continues to evolve as authorities place greater emphasis on ensuring Shariah-compliant financial services. For instance, in October 2025, Fasset secured a provisional banking license from the Labuan Financial Services Authority in Malaysia to expand into Shariah-compliant digital

banking services. The development enables the provision of interest-free savings, financing, and investment products leveraging stablecoins and tokenized assets. Such initiatives highlight the growing convergence of digital assets and Islamic finance, supporting innovation and broader access to compliant financial services.

Investment activity in Islamic fintech startups like Mal, Muhlah, and Haball has been increasing, with these startups securing significant funding to expand Shariah compliant digital banking and financing solutions. For instance, in January 2026, Mal raised USD 230 million in seed funding to build and launch a new AI powered Islamic digital bank. The investment round was led by BlueFive Capital and included other strategic investors and family offices. The capital is expected to support the development of Mal's digital banking products and accelerate regulatory licensing efforts.

The lack of standardized Shariah interpretations across jurisdictions creates regulatory inconsistencies, increasing compliance complexity and hindering the scalability of Islamic finance platforms. Differences among schools of thought and locally issued fatwas create inconsistencies in product structuring, governance, and certification. These challenges make cross-border Shariah compliance complex and resource-intensive for enterprises. Additionally, the absence of unified global standards and internationally recognized accreditation bodies limits interoperability and reduces investor confidence. As a result, market participants must invest in specialized Shariah advisory boards, modular compliance systems, and jurisdiction-specific validation, which raise operational costs and slow platform growth in regulation-sensitive markets.
