Isophorone Market Size & Trends

The global isophorone market was estimated at USD 1.36 billion in 2023 and is projected to expand at a CAGR of 5.1% from 2024 to 2030 owing to its rising demand in the formulation of adhesives. In adhesive formulations, the product serves as a hardening agent. Adhesives are employed in various end-user applications, such as polyvinyl chloride, plastics, polystyrene, etc. Rising demand for this application is further expected to increase the product demand globally.

The product market is also driven by its increasing significance in printing inks and artificial leather due to its excellent solvency and chemical stability. In printing inks, the product acts as a solvent that efficiently dissolves various resins and pigments ensuring smooth ink formation. Whereas, during the production of artificial leather the product is used to impart desired texture, flexibility and durability.

Isophorone is an unsaturated colorless to yellowish cyclic ketone with a characteristic smell. It is used as a solvent and an intermediate in organic synthesis. The product also occurs naturally in cranberries,

The product is used as an intermediate in manufacturing polyurethane field compounds, mainly isophorone diamine and isophorone diisocyanate. It is also used as a

chemical intermediate and ingredient in wood preservatives and floor sealants. In addition, the product is used in formulating pesticides and herbicides as an inert ingredient.
