Abstracts

The global jewellery machine market size was estimated at USD 4,211.3 million in 2025 and is projected to reach USD 5,946.0 million by 2033, growing at a CAGR of 4.6% from 2026 to 2033. The jewellery machine industry is driven by rising demand for precision, consistency, and faster production in jewellery manufacturing.

Growing consumer preference for intricate designs and customized pieces is pushing manufacturers to adopt advanced cutting, engraving, and faceting machines. Automation also helps reduce material wastage, which is critical when working with high-value metals and gemstones.

Another key driver is the rapid modernization of jewellery workshops, especially in emerging markets. Artisans and small workshops are gradually shifting from manual tools to semi-automatic and fully automatic machines to improve productivity and meet large orders. Expanding organized retail jewellery chains are also investing in modern equipment to maintain uniform design standards. In addition, supportive government initiatives for manufacturing and skill development are strengthening market growth.
