Latin America Animal Health Market Summary

The Latin America animal health market size was estimated at USD 7.2 billion in 2025 and is projected to reach USD 16.2 billion by 2033, growing at a CAGR of 10.8% from 2026 to 2033. The factors responsible for driving the market growth include rising livestock population and meat export demand, increasing pet ownership and humanization trends, expansion of veterinary healthcare infrastructure, and growing awareness of animal disease prevention and vaccination.

One of the crucial factors responsible for driving the Latin America animal health industry growth include the rising incidence and recurrence of transboundary and endemic livestock diseases, which significantly increases the demand for advanced vaccines, diagnostics, and comprehensive biosecurity solutions. Frequent disease outbreaks lead to economic losses due to mortality and culling and disrupt supply chains and export potential, compelling governments and livestock producers to strengthen surveillance systems, invest in rapid diagnostic technologies, and implement stricter movement control and disease prevention programs. This continuous need for disease management is accelerating the adoption of veterinary services, pharmaceutical interventions, and digital monitoring tools across the region.

For instance, according to an article published by Farm Journal, Inc, in January 2026, in Brazil outbreak of Classical Swine Fever in Piau? affected dozens of pigs and prompted

authorities to declare an animal health emergency, implementing quarantine, culling, and enhanced surveillance measures. The recurrence of such outbreaks in non-free zones highlights persistent viral circulation and biosecurity gaps, thereby driving increased investments in vaccination programs, traceability systems, and preventive animal healthcare infrastructure across Latin America.

Moreover, the continuous expansion and modernization of the dairy and livestock sector is significantly driving the Latin America animal health industry, as producers increasingly focus on improving productivity, herd efficiency, and milk yield. For instance, according to an article published by APEDA, in November 2025, Argentina is experiencing a strong recovery in its dairy industry, with milk production expected to rise supported by high yield per animal and favorable weather conditions. The country has also deployed over 1,050 milking robots, reflecting rapid technological adoption and improved farm efficiency. This advancement is directly increasing the need for veterinary interventions, herd health management, and preventive care solutions, thereby contributing to market growth. This shift toward high-performance farming is accelerating the demand for veterinary services, including disease prevention, reproductive health management, vaccination, and nutritional support. In addition, the adoption of advanced technologies such as precision feeding, genetic improvement, and automated milking systems is increasing the need for continuous animal health monitoring and specialized care, thus strengthening the overall demand for animal health products and services across the region.

Moreover, the expansion of worldwide veterinary pharmaceutical companies and the increasing penetration of advanced vaccines are strengthening access to high-quality preventive care and accelerating the adoption of modern immunization practices across the region. Companies are introducing innovative companion animal vaccines while investing in veterinarian training, awareness programs, and local distribution partnerships, which enhances disease prevention and boosts product uptake. For instance, in August 2025, Bioveta launched new vaccine lines, Biocan and Biofel for dogs and cats in Venezuela supported by seminars across four major cities Barquisimeto, Valencia, Maracay, and Caracas with around 100 veterinarians attending each session. The company has also expanded across key markets such as Mexico, Colombia, and Brazil, with further plans to enter Chile and Bolivia by 2026, reflecting rising demand for advanced veterinary vaccines and improved animal healthcare adoption.
