Abstracts

The global malaria therapeutics market size was valued at USD 3.1 billion in 2025 and is projected to grow from USD 3.2 billion in 2026 to USD 5.0 billion by 2033, at a CAGR of 6.5% from 2026 to 2033. The Middle East & Africa dominated the market, accounting for the largest revenue share of 47.1% in 2025. The malaria therapeutics industry growth is driven by the continued burden of malaria in endemic regions, particularly across sub-Saharan Africa and parts of the Asia Pacific, where sustained transmission creates consistent demand for effective treatment options.

The malaria therapeutics industry growth is driven by the continued burden of malaria in endemic regions, particularly across sub-Saharan Africa and parts of the Asia Pacific, where sustained transmission creates consistent demand for effective treatment options.

Growth in the market is supported by government-led malaria control programs, funding from international health organizations, and the increasing availability of artemisinin-based combination therapies (ACTs) through public health initiatives. Rising surveillance for drug-resistant *Plasmodium falciparum* strains has encouraged pharmaceutical companies and research organizations to advance the development of novel antimalarial therapies and combination regimens. In addition, improvements in diagnostic access and early case detection have strengthened timely treatment,

contributing to better disease management. For instance, in July 2025, Novartis, in collaboration with Medicines for Malaria Venture (MMV), received Swissmedic approval for Coartem Baby (artemether-lumefantrine), the first malaria treatment specifically developed for newborns and young infants, addressing a long-standing treatment gap in malaria-endemic regions and supporting broader access to age-appropriate antimalarial therapies.
