Abstracts

The global medical display monitors market size was valued at USD 2.8 billion in 2025 and is projected to grow from USD 2.9 billion in 2026 to USD 4.0 billion in 2033, at a CAGR of 4.6% from 2026 to 2033. North America held the largest revenue share of 37.2% in 2025. The growth of the medical display monitor industry is driven by the increasing adoption of digital imaging technologies, rising demand for accurate diagnostic interpretation, and continuous modernization of healthcare infrastructure.

Hospitals, diagnostic imaging centers, and specialty clinics are replacing conventional display systems with high-resolution medical-grade monitors that provide superior image clarity, color consistency, and brightness, enabling healthcare professionals to make more accurate clinical decisions. The growing volume of diagnostic imaging procedures, including X-rays, computed tomography (CT), magnetic resonance imaging (MRI), ultrasound, mammography, and digital pathology, has significantly increased the need for advanced display solutions capable of presenting detailed medical images with high precision. For instance, in November 2025, according to the OECD, the average across member countries reached 51 CT, MRI, and PET scanners per million population. The U.S. has 86 scanners per million. As healthcare providers continue to expand diagnostic imaging capabilities and prioritize accurate image interpretation, the demand for high-performance medical display monitors is expected to increase, supporting the sustained growth of the global medical display monitor market.

In addition, the expanding prevalence of chronic diseases such as cancer,

cardiovascular disorders, neurological conditions, and orthopedic diseases has led to higher demand for diagnostic examinations, further supporting market growth. Healthcare providers are also investing in integrated digital operating rooms, picture archiving and communication systems (PACS), electronic health records (EHRs), and telemedicine platforms, all of which rely on high-performance medical display monitors for efficient clinical workflows. For instance, according to the WHO, approximately 20 million new cancer cases were diagnosed globally, with the number projected to increase to 35 million by 2050, significantly raising demand for diagnostic imaging procedures. Furthermore, the OECD Health at a Glance 2025 reported that the average availability of online digital health services increased from 79% in 2023 to 82% in 2024, reflecting continued adoption of electronic health records, telemedicine, and digital clinical workflows.
