### **Mexico Compounding Pharmacies Market Growth & Trends**

The Mexico compounding pharmacies market is anticipated to reach USD 181.12 million by 2030 and is anticipated to expand at a compound annual growth rate (CAGR) of 5.02% from 2025-2030, according to a new report by Grand View Research, Inc. The increasing demand for personalized medicine is driven by the need to enhance treatment effectiveness, safety, and efficiency. The growing prevalence of chronic conditions, such as diabetes, cardiovascular diseases, and neurological disorders, is fueling the demand for customized formulations. Furthermore, compounding pharmacies are essential in improving medication adherence by addressing individual patient needs, including allergies, taste preferences, and dosage modifications. Therefore, the answer is: The increasing demand for personalized medicine, driven by the need for customized formulations and improved medication adherence, is propelling market growth.

The increasing accessibility of genetic testing and molecular profiling across the country allows healthcare professionals to tailor medications based on a patient's genetic makeup. For instance, a July 2021 article in the World Journal of Oncology titled "Personalized Medicine in Ovarian Cancer: A Perspective from Mexico" highlighted how researchers identified molecular factors involved in the pathogenesis of ovarian cancer. This discovery enables patients to receive personalized diagnoses and assists healthcare providers in predicting effective treatments for the disease, ultimately

improving the efficiency, cost-effectiveness, safety, and outcomes of healthcare. Moreover, nutritional deficiencies in the population present lucrative growth opportunities for compounding pharmacies. According to the World Health Organization (WHO), nutritional deficiencies were responsible for 10,726 deaths in Mexico in 2021. Data from the National Health and Nutrition Survey 2021 reported alarming rates of overweight and obesity, affecting 37.4% of children (5–11 years old), 42.9% of adolescents (12–19 years old), and 72.4% of adults (20 years and older).
