Microplastics Market Summary

The global microplastics market size was estimated at USD 1.2 billion in 2025 and is projected to reach USD 2.5 billion by 2033, growing at a CAGR of 10.0% from 2026 to 2033. Growing industrial use of plastic materials across packaging, textiles, automotive, and consumer goods is increasing the generation of secondary microplastics during product life cycles and disposal, driving the market growth.

The microplastics industry is undergoing a structural transition from conventional synthetic microparticles toward biodegradable and bio-based substitutes. Regulatory bans on intentionally added microplastics in cosmetics, detergents, and coatings are accelerating substitution across end-use industries. Simultaneously, demand for advanced detection and removal technologies is rising, particularly in water treatment and industrial effluents. Innovation is concentrated in membrane filtration, enzymatic degradation, and bio-based materials, indicating a shift from volume-driven consumption to technology-led mitigation and replacement solutions.
