Microsutures Market Summary

The global microsutures market size valued at USD 0.31 billion in 2024 and projected to reach USD 0.38 billion by 2030, growing at a CAGR of 3.31% from 2025 to 2030. This market growth is largely attributed to the advancements in minimally invasive surgical techniques, increasing prevalence of chronic diseases requiring precise wound management, and an increase in medical tourism.

The growing demand for cosmetic and reconstructive surgeries further propels the adoption of microsutures due to their ability to facilitate fine, less noticeable stitches, leading to better aesthetic outcomes. In addition, technological innovations in suture materials, such as biodegradable and high-strength sutures, enhance the efficiency and safety of procedures, encouraging their widespread use. The growing number of surgical procedures, mainly cosmetic and plastic surgeries, has resulted in fueling the market demand. For instance, according to the data published by the Global Survey 2023, Liposuction was the most common surgery in 2023, with over 2.2 million, followed by breast augmentation, eyelid surgery, abdominoplasty, and rhinoplasty. All these increased procedures directly influence the demand for sutures, which play a significant

role in wound closure and post-surgery recovery.

Beyond cosmetic surgeries, the demand for sutures is also propelled by essential medical procedures such as cesarean sections, orthopedic surgeries, and Cardiovascular Surgery interventions, further expanding the market's growth potential.
