Abstracts

The Middle East healthcare digital twins market size was estimated at USD 29.56 million in 2025 and is projected to reach USD 135.20 million by 2033, growing at a CAGR of 20.58% from 2026 to 2033. Government-led digital health initiatives, the expansion of smart hospitals, and the demand for data-driven clinical and operational decisions drive the adoption of digital twins in the Middle East healthcare sector.

Enabled by AI, IoT, cloud platforms, and connected devices, digital twins support capacity optimization, predictive care, and personalized medicine. Rising healthcare spending and a post-pandemic focus on resilience and efficiency are further driving the growth of the Middle East healthcare digital twins industry.

In healthcare, digital twins are used to generate digital replicas or models that mirror various aspects of healthcare data, including the hospital setting, human biological functions, and laboratory outcomes. The representations help to improve efficiency, anticipate future demand, and optimize costs. These factors are expected to drive demand for this technology over the forecast period.
