Market Size & Trends

The Middle East laparoscopic gynecological procedures market size was estimated at USD 97.1 million in 2024 and is projected to reach USD 145.5 million in 2033, growing at a CAGR of 4.7% from 2025 to 2033. The market's growth is attributed to factors such as the increasing prevalence of gynecological conditions, such as endometriosis, uterine fibroids, and ectopic pregnancies. The growing awareness among patients and healthcare professionals regarding the benefits of laparoscopic procedures is further fueling market growth.

This awareness is enhanced by educational campaigns, advancements in medical technology, and the increasing availability of skilled surgeons trained in laparoscopic techniques.

Also, the rising healthcare spending in several Middle Eastern countries, along with the governments' efforts to improve the healthcare infrastructure, constitute a good atmosphere for advanced surgeries to be taken. The development of private healthcare facilities, in which the most recent technology is usually used, is also a factor that has a positive effect on the market growth.

The UAE's significant drive toward cutting-edge, minimally invasive gynecological care has been fueling market growth. In 2022, Sheikh Shakhbout Medical City (SSMC), a joint venture between SEHA (Abu Dhabi Health Services Company) and Mayo Clinic, expanded its robotic surgery offerings to include gynecology. This expansion marks a major investment in surgical technology and building institutional capacity for complex laparoscopic and robotic procedures.

Also in May 2023, Burjeel Holdings in Abu Dhabi opened the Advanced Gynecology Institute (AGI) at its flagship hospital, Burjeel Medical City. The AGI was set up in partnership with IFEM Endo (Franco-European Multidisciplinary Institute of Endometriosis Academy) and includes specialized clinics for gynecological oncology, endometriosis care, and complex gynecology. The institute features state-of-the-art surgical suites that can handle laparoscopic and robotic surgeries, to make minimally invasive procedures like those for fibroids, endometriosis, and benign ovarian masses more accessible.
