### Middle East Midline Catheters Market Summary

The Middle East midline catheters market size was estimated at USD 78.38 million in 2024 and is projected to reach USD 119.76 million by 2033, growing at a CAGR of 4.81% from 2025 to 2033. The regional industry is growing due to healthcare modernization, rising chronic disease rates, and demand for cost-effective vascular access.

Investments in infrastructure, especially in Saudi Arabia and the UAE, under initiatives like Vision 2030, are driving adoption. Increased cases of diabetes, cancer, and cardiovascular diseases requiring long-term IV therapy further fuel the demand. The shift toward outpatient and home care, along with innovations such as ultrasound-guided insertion and antimicrobial coatings, enhances safety and supports wider use of midline catheters.

The rising preference for minimally invasive procedures is driving the adoption of midline catheters in the Middle East, as they provide a safer, less invasive alternative to central lines for intermediate-term IV therapy. Reducing risks such as bloodstream infections and supporting faster recovery aligns with growing trends toward patient-centered and cost-effective care. For instance, in June 2023, the Saudi Journal of Emergency Medicine published a study showing that simulation-based training significantly improved emergency physicians' and nurses' skills and confidence in

ultrasound-guided midline catheter insertion, highlighting the importance of hands-on education in enhancing procedural proficiency.

The rising prevalence of diabetes is a key factor driving the growth of the midline catheter market in the Middle East. Diabetic patients often require frequent and prolonged intravenous therapies for managing infections, administering medications, or maintaining hydration-needs that are well-suited for midline catheters. These devices offer a safer and more efficient alternative to repeated peripheral IV insertions, reducing vein damage and infection risks. As diabetes continues to burden regional healthcare systems significantly, the demand for reliable, long-term vascular access solutions like midline catheters is expected to grow.
