Mosquito Repellent Candles Market Growth & Trends

The global mosquito repellent candles market size is expected to reach USD 61.9 million by 2030, registering a CAGR of 3.4% from 2024 to 2030, according to a new report by Grand View Research, Inc. These citronella based candles are rapidly adopted by the common mass as they have been found to be safer for human health than other forms of repellents.

The conventional mosquito coils are one of the commonly used repellents in the countries of Asia and Africa, which are found to be carcinogenic and can lead to lung cancer. These forms contain pyrethrin, a pesticide, which can cause headache, sensory irritation, nausea, and various breathing problems. It has been observed that burning coils in a closed room is equivalent to smoking 100 cigarettes. Thus, it has been found that these mosquito repellent candles are expected to remain one of the safer and non-hazardous alternatives to the conventional mosquito coils over the next few years.

Celebrations, religious ceremonies, get-togethers, and festivals have a great significance for lightning candles and as most of these festivities are celebrated in open, citronella candles can help in creating mosquito free ambience. Along with creating a great ambience, these candles provide soothing effect to the mind. These products also

prevent the growth and contamination of air borne germs and other insects. It has been observed that lighting these products during meditation helps in uplifting the spirit and calming the thought process. It relaxes the mind and body by reducing muscle spasms and headaches, ultimately boosting the energy. Thus, the global market is expected to witness significant gains from mediation centers, which are keen on maintaining physical and mental health.

Mosquito repellent candles have become the first preference of spa and body massage centers owing to their tremendous benefits. Along with repelling mosquitoes and other insects and setting up an ambience, citronella, which is an important ingredient, helps in refreshing body odor by reducing the germs all around. Additionally, most anti-aging therapies require lighting these candles owing to their property to slow down the aging process and improve the skin health by increasing its capacity to absorb moisture. It also helps the body in excreting toxins and thus has been found to be helpful in reducing flu, cold, and fever.

Mosquito Repellent Candles Market Report Highlights

The container based dominated with a global market share of 52.1% in 2023. The major factors contributing to the segment growth include the availability of candles in different containers such as glass, plastic, metal, and ceramic.
