### **Network Point-of-Care Glucose Testing Market Growth & Trends**

The global network point-of-care glucose testing market size is expected to reach USD 1.6 billion by 2028, according to a new report by Grand View Research, Inc. It is expected to expand at a CAGR of 3.9% from 2021 to 2028. Increasing demand for safe and accurate remote patient monitoring options and the need for data-based treatment regimens are major factors driving the market. The integration of advanced technologies including Bluetooth Low Energy (BLE) and Infrared is expected to fuel the market growth in the upcoming years.

Expanding patient base in Asia Pacific and the Middle East and the high demand for advanced diabetes management systems are creating significant growth opportunities in these regions. These regions also include some of the highly preferred destinations for medical tourism. Increasing demand for world-class healthcare services and rising adoption of advanced technology are some of the factors boosting the market growth in these regions.

Network point-of-care glucose meters were extensively used in COVID-19 care. This enabled doctors to remotely observe glucose levels with minimal risk of infection. In addition, a large amount of data is still being used to customize treatment plans for

diabetic COVID-19 patients. Preference for telemedicine and trends of home healthcare settings for chronic patients are some of the factors expected to expand the applications of network-based point-of-care devices.

#### Network Point-of-Care Glucose Testing Market Report Highlights

Network point-of-care devices were in high demand during the first and second wave of COVID-19 owing to their advantage of remote patient monitoring

Based on product, the Accu-Chek Inform II segment held the largest revenue share in 2020 and is expected to expand at a lucrative growth rate during the forecast period
