Abstracts

The North America dry cooler market size was valued at USD 949.1 million in 2025 and is projected to grow from USD 1,013.0 million in 2026 to USD 1,762.7 million by 2033, at a CAGR of 8.2% from 2026 to 2033. The U.S. dominated the market, accounting for the largest revenue share of 79.7% in 2025. The rapid expansion of data centers, AI infrastructure, and high-density computing facilities is increasing demand for reliable heat-rejection systems across North America. Rising computing loads generate greater heat within data center environments, requiring cooling systems that can operate continuously while maintaining equipment reliability.

The expansion and modernization of manufacturing and industrial facilities is also supporting demand for dry coolers. Industries such as food & beverage, chemicals, pharmaceuticals, power generation, and general manufacturing require cooling for process equipment, compressors, heat exchangers, and other heat-generating machinery.

At the same time, growing emphasis on energy efficiency, water conservation, and reliable plant operations is encouraging industrial users to consider air-based heat-rejection systems. These factors are broadening the application of dry coolers beyond traditional cooling requirements and supporting market growth across North America.
