Omics Lab Services Market Growth & Trends

The global omics lab services market size is expected to reach USD 194.04 billion by 2030, registering CAGR of 13.72% during the forecast period, according to a new report by Grand View Research, Inc. The development of the market is attributed to growing integration of the genomics data into clinical workflow and rising adoption of direct-to-consumer omics. Moreover, rising demand for early disease diagnostic test, technological advancements aided with increasing government funding is further propelling growth of the overall market.

Growing recognition of omics' potential in human disease management and other nonconventional applications has fueled the implementation of omics data. This, in turn, has increased competition among firms to introduce products and technologies by leveraging available genetic information, capitalizing on the ample growth avenues in the market. Advanced laboratory analytics also support the development of precision and personalized medicine, which has an influence beyond general patient care. Thorough progress has already been made in the field of oncology, and developments in omics and single-cell micro technology have greatly benefited progress toward upcoming patient-centered approach.

Moreover, the field of oncology has benefited most from omics research, and one newly developed use of NGS clinical tests is for the quantification of circulating tumor DNA (ctDNA) from plasma. Numerous NGS technologies, such as Cancer Personalized Profiling by deep Sequencing, may be used. High-throughput RNA sequencing developments have brought light the importance of transcriptomics in biological and clinical research. RNA sequencing using NGS technologies or microarrays are two ways to perform transcriptomics. Proteomics and metabolomics are two domains that have been significantly characterized by improvements in NMR and MS technologies.

Furthermore, key players operating in the market are focusing on incorporating omics technology in early diagnosis. For instance, in May 2021, Burning Rock Biotech Limited launched PRESCIENT, first pan cancer, multi omics early detection study in China. In March 2022, PrognomiQ invested USD 46.0 million in advancing development of multiomics for early detection of cancer. In September 2022, Bertis launched Proteomic based research of its new biomarkers for diagnosis of ovarian cancer. Moreover, in July 2022, Mission Bio, Inc. launched Tapestri platform for single cell multiomics-based MRD detection in blood cancers. These initiatives and research in the field of omics for the development of early diagnosis tools is further propelling the overall omics labs services market growth.
