Abstracts

The global oral wound dressing market size was valued at USD 2.5 billion in 2025 and is projected to grow from USD 2.8 billion in 2026 to USD 5.3 billion by 2033, growing at a CAGR of 9.7% from 2026 to 2033. North America dominated the oral wound dressing industry, accounting for the largest revenue share of 40.20% in 2025. The market is primarily driven by the increasing prevalence of oral ulcers, periodontal diseases, and oral mucositis associated with cancer therapies.

Rising volumes of dental implant procedures, tooth extractions, and other oral surgeries are creating greater demand for products that accelerate healing and reduce post-operative complications. In addition, advancements in bioadhesive hydrogels, collagen-based dressings, and antimicrobial wound care technologies are improving clinical outcomes and supporting wider adoption across hospitals and dental clinics.

The growing global burden of oral diseases, affecting approximately 3.7 billion people worldwide, is increasing the number of patients requiring treatment for oral ulcers, periodontal conditions, and surgical wounds. This expanding patient population is driving demand for oral wound dressings that promote faster healing, reduce pain, and protect oral tissues from infection and further injury.

The rising incidence of oral cancer is a significant market driver, as patients frequently

undergo surgical resections, radiation therapy, and chemotherapy that result in painful oral wounds and mucosal damage. These treatments increase the need for advanced wound dressings that can protect tissues, reduce pain, prevent infection, and accelerate healing. In addition, the growing number of oral cancer cases worldwide is driving demand for bioadhesive, antimicrobial, and regenerative oral wound care products across hospitals and oncology centers.
