Pediatric Dental Market Growth & Trends

The global pediatric dental market size is expected to reach USD 14.13 billion by 2028, according to a new report by Grand View Research, Inc. It is expected to expand at a CAGR of 5.5% from 2021 to 2028. The growth is attributed to the technological advancements in pediatric dental procedures. Moreover, an increasing number of oral health disorders is expected to contribute to the growth of the market.

According to the CDC, cavities are the most common chronic diseases of children in the U.S. Untreated cavities can cause infection and pain that lead to problems with speaking, learning, eating, and playing. 1 out of 5 children aged 5 to 11 years have at least one untreated decayed tooth that needs to be treated on time. Dental sealants can prevent cavities for a long time. Application of dental sealants on the chewing surface of the back teeth prevents 80% of cavities. Thus, the treatment by dental sealants is anticipated to boost the market growth. The COVID-19 pandemic negatively affected the market growth.

The Urban Institute, in April 2021, stated many parents were delaying bringing their children to medical and dental clinics due to worries that children may be exposed to COVID-19. Parents with low-income households mostly avoided or delayed scheduling

of dental appointments other than higher income. The COVID-19 pandemic negatively affected the market due to the shutdown of dental offices.

The possible application of 3D printing is still coming to light in the dental industry. The lab tool has shifted to implantology, general dentistry, prosthodontics and even to create custom devices to help dental patients with sleep apnea. This shift towards advanced treatment is anticipated to drive the market.
