Abstracts

The global pemphigus vulgaris market size was estimated at USD 481.3 million in 2024 and is projected to reach USD 975.2 million by 2033, growing at a CAGR of 8.2% from 2025 to 2033. Improved diagnostics & early detection, advancements in treatment modalities, and increasing R&D investments drive market growth.

Pemphigus vulgaris is a rare, severe autoimmune blistering disease primarily affecting the skin and mucous membranes. It accounts for approximately 70% of all pemphigus cases globally. Reported incidence varies globally by geography and ethnicity, ranging from 0.5 to 50 new cases per million people yearly.

Governments and foundations worldwide have initiated several programs to support individuals suffering from PV. For instance, in December 2023, in the U.S., the PAN Foundation, in partnership with the International Pemphigus & Pemphigoid Foundation (IPPF), offered financial assistance to PV patients. Eligible individuals are provided up to USD 6,600 annually to cover expenses and support services for patients & their caregivers.
