### **Periodontal Scalers And Curettes Market Growth & Trends**

The global periodontal scalers and curettes market size is expected to reach USD 209.8 million by 2027, expanding at a CAGR of 14.7%, according to a new report by Grand View Research, Inc. Periodontal scalers and curettes are dental equipment used in the procedure of dental scaling which is associated with the extraction of tartar or calculus deposits from the subgingival and supragingival region of the teeth. The procedure is carried out by using handheld devices like dental scalers and curettes that comprises a handle, a shank, and a working end. Factors like the high prevalence of dental diseases, increasing focus on dental aesthetics, increasing dental expenditure for good oral health, and high efficiency of ultrasonic dental scalers are fuelling the market growth.

Periodontal scalers can be mechanical or power-driven (oscillatory) and come along with interchangeable tips that are available in varied shapes, sizes, and materials. The accessibility of such dental equipment that is varied and technologically advanced has eased dental scaling and root debridement procedures for dentists and hygienists. As per the WHO statistics, it is estimated that 3.9 billion people suffer from caries of permanent teeth and periodontal gum diseases (gingivitis and periodontitis). The diseases have affected 50.0% of the adult population worldwide in 2019. According to the American Dental Association, 85.0% of individuals in the U.S. truly value dental health and consider oral health an essential aspect of overall care. Many countries

globally, has also witnessed high adoption of dental aesthetic procedures as good oral health is deemed as an important social asset. These factors are expected to boost the market growth.

### Periodontal Scalers And Curettes Market Report Highlights

The oscillatory segment emerged as the largest segment in 2019, and factors like high patient comfort, efficiency, and reduced hand fatigue are responsible for the segmental growth

The curved blade segment is anticipated to be the fastest-growing segment over the forecast period as it provides dentists better movement across tooth surface and higher access to the narrow embrasure spaces of teeth

North America dominated the market in 2019, due to the rising importance of good dental health and high adoption of technologically advanced procedures

Asia Pacific is expected to reciprocate the highest CAGR over the forecast, as there is a high prevalence of dental conditions like periodontal gum diseases in emerging economies.
