Personal Health Record Software Market Growth & Trends

The global personal health record software market size is expected to reach USD 14.87 million by 2028, growing at a CAGR of 9.9% over the forecast period, according to a new report by Grand View Research, Inc. High acceptance of advanced technologies, growing demand for centralizing, and streamlining of healthcare information, rising awareness among patients for medical information storage and management, and increasing government initiatives will support the market growth during the forecast period.

For instance, in October 2019, The Union Ministry of Health and Family Welfare, Government of India developed an app, 'My Health Record', which permits users to store their past prescriptions, detailed health profile, lab records & diagnoses at one platform and share it with medical specialists when required. The COVID-19 has toppled the way of work and life, enforcing healthcare groups to share individual's medical records in a format that is meaningful and easily available.

The Department of Health and Human Services Office of the National Coordinator for Health Information Technology, together with the Centers for Medicare & Medicaid Services, issued two new rules to come into force in April 2021. One rule requires

healthcare groups to make health record data available electronically through broadly-used technical standards. While the other forbids “information blocking,” where healthcare groups place excessive practical, cost, and technical barriers to the sharing of health information.

The North American region held the largest revenue share of over 55% in 2020 owing to the government initiatives for eHealth and an increased need to follow regulatory guidelines and curtail the rising healthcare costs. The European region held the second-largest market share in 2020 owing to the decreased cost of care and prediction of a possible medical emergency.

Key players are investing in many strategic initiatives, such as acquisitions, mergers, partnerships, and product launches, among others to maintain a competitive edge in the market. For instance, in March 2020, Knapsack Health launched a free Personal Health Record for individuals, families, and caretakers.
