Personal And Household Service Robots Market Summary

The global personal and household service robots market size was estimated at USD 18,127.93 million in 2025 and is projected to reach USD 90,944.46 million by 2033, growing at a CAGR of 22.4% from 2026 to 2033. The market is witnessing strong growth, driven by the increasing demand for automation, convenience, and efficient household management technologies among consumers.

As households increasingly adopt smart home technologies and connected devices, service robots are becoming essential for performing daily tasks such as cleaning, lawn maintenance, and home monitoring with minimal human intervention.

The demand for personal & domestic service robots is increasing as consumers seek to enhance convenience, efficiency, and automation across daily household activities. Many households are increasingly adopting advanced robotic solutions, such as robotic vacuum cleaners, floor-mopping robots, lawn-mowing robots, and companion robots to enable efficient task execution, seamless home management, and reduced manual effort in routine chores. Additionally, the rapid adoption of smart home ecosystems, connected devices, and mobile-controlled platforms is driving the need for intelligent and responsive robotic systems that can operate autonomously while supporting

continuous user interaction.

Technologies such as artificial intelligence, computer vision, and IoT play a critical role in improving navigation efficiency, enabling real-time decision-making, and enhancing the user experience, making these robots essential for modern smart homes.

Furthermore, the expansion of urban households, the rise in dual-income families, and the growing aging population are accelerating demand for assistive and service robots in residential environments. These solutions enable consumers to achieve improved quality of life, time savings, and enhanced home safety, positioning personal and domestic service robots as a key component of next-generation smart living and home automation ecosystems.
