### **Personal Protective Equipment Market Growth & Trends**

The global personal protective equipment market size is anticipated to reach USD 131.2 billion by 2030, registering a CAGR of 6.7% over the forecast period, according to a new report by Grand View Research, Inc. The global personal protective equipment market is significantly driven by increasing spending on worker safety and protective products coupled with rising awareness about the stringent safety rules and regulations.

The COVID-19 outbreak had a positive impact on the growth of the personal protective equipment market. The market was significantly attributed to the high demand for protective equipment to protect against COVID-19 infection in 2020. Over the forecast period, market growth is expected to witness steady growth attributed to the increasing use in various industries.

The increasing awareness among industry participants regarding the importance of worker safety and security at workplaces on account of the stringent regulations and high costs associated with workplace hazards is anticipated to drive market growth. Particularly, rising awareness and new rules and regulations in Asia Pacific are likely to fuel the market growth over the forecast period.

The increasing rate of fatalities at the workplace has imposed workers to use personal protective equipment to ensure the safety of the individuals. Furthermore, the increasing number of the blue-collar workforce across numerous R&D establishments and production factories is expected to fuel PPE demand over the forecast period.

Government regulations compel the use of protective equipment for workers in end-use industries such as oil and gas, mining, and construction. Work safety regulations play a major role in driving the personal protective equipment market. Mandated policies by agencies for companies to maintain worker safety in industries are anticipated to drive demand for personal protective equipment.

Companies such as DuPont and 3M are undertaking expansion strategies to strengthen their product portfolio and market share. In May 2022, 3M announced expanding production for personal protective equipment such as respiratory and hearing protection products. This expansion will allow 3M to increase investment to meet the unmatched demand for PPE.

### Personal Protective Equipment Market Report Highlights

The chemical defending protective clothing was the leading protective clothing segment in 2021 on account of the widespread use in chemical and petrochemical industries and stringent rules and regulations

The head protection equipment is expected to witness a CAGR of 7.6% on account of increasing demand in industries such as construction, manufacturing, oil & gas, mining, etc. to protect from head injuries

Europe held a significant PPE market share in 2021, accounting for 30.6% of global revenue owing to an increasing rate of occupational injuries coupled with growth requirement for highly effective wear & tear resistance in the oil & gas and automotive industries

Asia Pacific is expected to witness strong growth over the forecast period owing to increased health consciousness and product awareness facilitated by the COVID-19 outbreak and expansion of the market players in the region

Key players are focusing on product development to expand the portfolio and drive revenue generation. For instance, in September 2021, Radians Inc. launched a safety helmet called Titanium, expanding its existing head protection
