Pervious Concrete Installation Market Trends

The global pervious concrete installation market size was estimated at USD 14.73 billion in 2023 and is forecasted to grow at a CAGR of 5.5% from 2024 to 2030. This growth is attributed to the rising construction projects around the world coupled with an increasing inclination towards green, eco-friendly, and sustainable construction materials such as pervious concrete. In addition, the growing initiatives by governments of various countries to recharge groundwater levels are also driving the demand for products over the coming years.

The product allows water to pass through the surface, thereby improving stormwater management and reducing runoff. Moreover, pervious concrete helps in reducing the heat island effect and recharging groundwater levels which makes it an environmentally friendly option as compared to its substitutes. Therefore, as the government is enforcing incentives and regulations for sustainable construction along with stormwater management is expected to positively affect the market growth over the forecast period.

As compared to regular concrete products, pervious concrete is considered to require low maintenance and have a long lifespan which makes it a cost-effective. It is used in several applications such as commercial, infrastructure, public places, and

residential as it offers superior aesthetic and functional benefits. Furthermore, this product is highly used in regions prone to flooding as it helps in mitigating damage risk by allowing water to pass through the ground. This results in low surface water accumulation.

However, the market possesses a few factors which act as its restraint. Installation cost of pervious concrete is higher when compared to traditional concrete owing to the requirement of specialized techniques and materials. In addition to this, due to its low strength in comparison to traditional concrete, its use is limited in heavy-load applications. With time pervious concrete becomes clogged which results in low effectiveness and permeability. Additionally, there is still limited expertise and awareness in the construction industry regarding the proper use and maintenance of products. This further limits its use in the market.
