Abstracts

The global photopolymers market size was estimated at USD 3.14 billion in 2024 and is projected to reach USD 8.11 billion by 2033, growing at a CAGR of 11.3% from 2025 to 2033. The growth of the market can be attributed to increasing utilization of high-speed printing, durable complex 3D printed objects, along with design precision are anticipated to propel the demand for the market.

Rising demand for prototyping across automotive industry and designs for understanding complex surgical procedures have increased the demand for photopolymer for 3D printing. Furthermore, increasing demand for artificial jewelry and prosthetics across the global population are further propelling the market growth. The U.S. dominated photopolymers market in North America in 2024 owing to the rising demand for photopolymers from the automotive industry in the country. Original equipment manufacturers (OEMs) in the U.S. are focusing on upgrading traditional prototyping and component-developing methods.

The requirement for manufacturing automotive components such as high-performance components at a large scale, ensuring an abundant supply of spare parts using 3D printing, and easing general component manufacturing is anticipated to propel the demand for photopolymers used for 3D printing of components across the U.S. during the forecast period.
