Summary

The global plastic container market size was estimated at USD 113.92 billion in 2025 and is projected to reach USD 163.62 billion by 2033, growing at a CAGR of 4.6% from 2026 to 2033. The increasing demand for plastic containers in the cosmetics & personal care, growing demand for rigid packaging from food and beverage packaging, and increased need for lightweight, durable, and cost-effective packaging in industries such as pharmaceuticals, and personal care are the factors driving market growth worldwide.

The demand for plastic packaging has been escalating due to its convenience, creative visual appeal, and innovative eco-friendly options. The plastic container market is witnessing significant growth, driven by the availability of advanced, affordable, and sustainable packaging solutions. The excellent barrier properties of plastic packaging play a crucial role in market development, effectively protecting products from air and moisture, which is particularly important in industries such as cosmetics and personal care.

In the cosmetics and personal care sector, polypropylene is widely used to manufacture bottles and jars for packaging creams, powders, and other cosmetic products. The compact size and durability of these containers provide protection from air, light, moisture, dust, and dirt, ensuring the integrity of the packaged products. The increasing demand for skin care products has contributed to the growth of the cosmetics and

personal care market, which is expected to drive the plastic containers market share over the forecast period
