### Summary

The Poland protein ingredients market size was estimated at USD 1.16 billion in 2024 and is projected to reach USD 2.08 billion by 2033, growing at a CAGR of 6.8% from 2025 to 2033. The growth is driven by increasing consumer awareness regarding the benefits of protein-rich diets and preventive healthcare, leading to higher demand for flexitarian and plant-forward diets.

Plant-based protein ingredients sourced from almond, soy, oat, potatoes, rice, and beans are increasingly used in beverages, meat analogues, and high-protein snacks, even as traditional proteins like whey and casein remain popular in sports and clinical nutrition applications. According to the Smart Protein project, approximately 24% of Polish consumers are flexitarian, and 6% follow a vegetarian or vegan diet. Health concerns such as anemia and low birth weight are expected to boost the demand for protein ingredients. According to the Global Nutrition Report by PATH, 25.7% of women aged 15 to 49 suffer from anemia, and 5.9% of infants are born underweight, highlighting the need for better nutrition.

In addition to the health needs, consumers are also looking for functional benefits, better taste, and personalized health solutions. This has led to increased interest in clean-label products, sugar-free options, and eco-friendly packaging solutions. The distribution of such products is increasing and becoming easier with the presence of

online channels and pharmacies, making protein products more accessible. Product demand is especially strong among active individuals and the aging population, focused on maintaining muscle health and overall well-being. However, taste remains a challenge, as alternative proteins like pea and soy often have off-flavors, pushing companies to invest in flavor improvement and better formulations.
