Abstracts

The global polyaniline market size was estimated at USD 1.37 billion in 2024 and is projected to reach USD 2.25 billion by 2033, growing at a CAGR of 5.7% from 2025 to 2033. Growing use of Polyaniline (PANI) in energy storage devices such as supercapacitors and batteries is driving market growth, as the material offers high conductivity and stable performance for efficient charge storage.

Increasing investments in renewable energy and electric mobility are further boosting demand for advanced conductive polymers such as polyaniline.

Commercialization of engineered PANI composites and functional inks is redefining how polyaniline is adopted across sectors. Over the last 24 months R&D has shifted from neat PANI powders toward hybrid formulations (PANI combined with carbon, MXene, or nanofibers) and printable ink chemistries that enable flexible EMI shielding, printed sensors and patternable energy-storage electrodes. This productization trajectory is enabling thinner, lighter and mechanically robust conductive layers that meet electronics manufacturing tolerances and scale more readily into end-use assemblies.
