Abstracts

The global polycaprolactone filler market size was valued at USD 57.3 million in 2025 and is projected to grow from USD 62.5 million in 2026 to USD 115.5 million by 2033, at a CAGR of 9.2% from 2026 to 2033. Asia Pacific dominated the global market with the largest revenue share of 36.3% in 2025. The market is witnessing steady expansion due to the rising demand for long-lasting, minimally invasive aesthetic procedures.

Polycaprolactone (PCL) is widely used as a biostimulatory filler, meaning it not only restores immediate volume but also stimulates natural collagen production over time. This dual mechanism is driving strong adoption in facial rejuvenation treatments, especially among patients seeking longer-lasting alternatives to hyaluronic acid fillers.

Clinical evidence also supports its durability and efficacy, with studies showing sustained improvement in wrinkle severity and aesthetic outcomes for up to 24 months post-treatment. The clinical study titled "Polycaprolactone for the Correction of Nasolabial Folds", evaluated the long-term safety and efficacy of polycaprolactone (PCL)-based dermal fillers (Ellans?-S and Ellans?-M) for facial wrinkle and fold correction.

One of the major growth drivers of the PCL filler industry is the increasing preference for non-surgical facial volume restoration procedures. Aging populations, particularly in

developed and emerging economies, are actively opting for injectable solutions instead of surgical facelifts due to lower risk and shorter recovery time. PCL-based fillers are gaining traction in applications such as facial volume restoration and wrinkle & fold correction, as they provide both immediate correction and long-term skin thickening through collagen stimulation. Another key driver is the rising innovation in liquid PCL formulations and hybrid fillers, which are improving injection ease and expanding treatment versatility. Liquid PCL products are increasingly used in delicate areas, such as periorbital rejuvenation and skin quality improvement, where controlled, even distribution is critical.
