Abstracts

The global polydeoxyribonucleotide injectables market size was estimated at USD 211.37 million in 2024 and is projected to reach USD 803.55 million by 2033, growing at a CAGR of 16.2% from 2025 to 2033. This growth is driven by increasing awareness of aesthetic treatments, technological advancements, and a move towards minimally invasive therapies.

Moreover, the introduction of innovative PDRN injectables, including advanced formulations that combine polydeoxyribonucleotides (PDRN) with hyaluronic acid (HA) and essential vitamins. These innovations improve the regenerative and rejuvenating properties of PDRN, addressing a wider range of skin issues and enhancing patient results.

Combination PDRN injectables are quickly gaining widespread acceptance because they can single-handedly address multiple skin problems. To illustrate, the debut of VAMP by Prolenium represents a new milestone in skin revitalization. The product pairs PDRN with a nutrient cocktail of vitamins, amino acids, and minerals to deliver skin firmness, hydration, and quality at a whole new level. VAMP sets out to breathe new life into the skin tone, shrink pore sizes, and wrinkle-free, and give the already compromised skin a chance to rejuvenate; therefore, it is on the cutting edge of aesthetic dermatology as its name suggests. According to a research article published by Science Direct, hyaluronic acid-polydeoxyribonucleotide (HA-PDRN) cross-linked hydrogels are a very efficient means of skin regeneration. The hydrogels made by the

covalent bonding of carboxyl groups of Hyaluronic Acid to amino groups of PDRN show enhanced biocompatibility and more collagen production than those made solely from Hyaluronic Acid. These studies indicate the immense possibilities of developing more stable and effective injectable treatments by combining PDRN and HA.

PDRN-related anti-aging advantages greatly boost the injectable market, particularly for those middle-aged to older individuals looking for non-surgical means of facial rejuvenation. PDRN is known to increase collagen levels, repair tissue, and improve skin elasticity, leading to decreased wrinkles, fine lines, and sagging skin in general. PDRN's great benefit of repairing damaged tissues to achieve a younger appearance is extraordinarily attractive for those looking for effective, long-term anti-aging solutions. As people become more familiar with these benefits, the injectable market will continue to grow in demand. Moreover, there is an increased interest in aesthetic treatments in regions with an aging population.

In addition, the scar-healing property of PDRN for acne is becoming a major factor in market growth. The regenerative aspects of PDRN injections are a perfect solution for the skin problems caused by acne. PDRN can reduce the concentration of acne scars and improve the skin surface by activating cell regeneration and tissue repair. As a result, treatments based on PDRN are getting increasingly popular with both young and mature patients who want to solve their skin problems in a safe, non-surgical way, thus being the main factor in the increasing installation of PDRN injections in aesthetic dermatology.
