Quick Commerce Market Summary

The global quick commerce market size was valued at USD 244.7 billion in 2025 and is projected to grow from USD 297.5 billion in 2026 to USD 1,303.5 billion by 2033, at a CAGR of 23.5% from 2026 to 2033, driven by the rising consumer preference for ultra-fast delivery services and on-demand convenience. Asia Pacific quick commerce industry dominated the global market with the largest revenue share of 45.8% in 2025.

Modern consumers, particularly in urban areas, increasingly expect groceries, personal care products, pharmaceuticals, and daily essentials to be delivered within minutes rather than hours or days. The widespread penetration of smartphones, mobile applications, and digital payment ecosystems is also supporting quick commerce industry expansion. Increasing internet accessibility and growing consumer familiarity with app-based commerce platforms have enabled quick commerce companies to scale their customer base rapidly across developed and emerging economies. Advanced mobile interfaces, AI-driven recommendation engines, real-time inventory visibility, and frictionless payment systems are enhancing customer engagement and improving repeat purchase rates. In addition, the growing integration of loyalty programs, subscription-based delivery models, and personalized offers is strengthening customer retention and increasing order frequency.

Rapid urbanization and increasing population density in metropolitan regions are also key contributors to the market's growth. High-density urban environments create favorable operating conditions for quick commerce providers by enabling shorter delivery radii and improved fleet utilization. The expansion of middle-class populations, rising disposable incomes, and changing consumption patterns in emerging economies such as India, Southeast Asia, Latin America, and the Middle East are further accelerating demand for instant delivery services. Consumers are increasingly prioritizing convenience-oriented retail solutions, creating strong opportunities for quick commerce platforms to expand into tier-1 and tier-2 cities globally.
