## Abstracts

The global refurbished medical equipment market size was estimated at USD 21.30 billion in 2025 and is projected to reach USD 50.03 billion by 2033, growing at a CAGR of 11.32% from 2026 to 2033. This is attributed to the rising healthcare costs, which are pushing hospitals, clinics, and diagnostic centers to seek cost-effective alternatives to new devices without compromising quality or performance.

Moreover, increasing demand for advanced medical technologies in rural and underserved regions also fuels adoption, as refurbishment allows redistribution of high-quality equipment to these areas. In addition, environmental sustainability concerns and regulatory support for reuse are further encouraging refurbishment, reducing electronic waste and maximizing the lifecycle of devices.
