Abstracts

The global renewable feedstock chemicals market size was valued at USD 153.2 billion in 2025 and is projected to grow from USD 168.1 billion in 2026 to USD 337.5 billion by 2033, at a CAGR of 10.5% from 2026 to 2033. Asia Pacific held the largest global revenue share of 38.3% in the renewable feedstock chemicals industry in 2025. The growth of the market is being strongly driven by technological advancements in biotechnology, biomass conversion, and bio-refinery integration.

Increasing investment in circular economy solutions is creating substantial opportunities for renewable feedstock chemical manufacturers. Companies are focusing on converting agricultural residues, waste oils, forestry by-products, and industrial biomass into high-value chemicals, enabling both waste reduction and resource optimization. The growing commercial viability of second-generation feedstocks is opening new revenue streams for producers while minimizing competition with food supply chains. Strategic collaborations between biotechnology firms, chemical manufacturers, and research institutions are also accelerating the development of advanced renewable formulations.
