Abstracts

The Saudi Arabia nutraceuticals market size was estimated at USD 3,262.3 million in 2024 and is projected to reach USD 5,964.3 million by 2033, growing at a CAGR of 6.9% from 2025 to 2033. The country is witnessing a surge in demand for functional foods, dietary supplements, and fortified beverages, with vitamins among the most commonly used products.

The market is supported by a young and health-conscious population, a growing fitness culture, and rising disposable incomes. In Saudi Arabia, according to the research paper titled "Patterns and determinants of dietary supplement use among Saudi adults: A cross-sectional study," published in PubMed Central, commonly consumed nutraceuticals during the pandemic included vitamin D, vitamin C, omega-3, and iron, due to their immune and anti-inflammatory properties. Usage of these nutraceuticals was significantly higher among women, older adults, pregnant women, and individuals with higher education and income levels.

In Saudi Arabia, the primary reasons for use of supplements include general health promotion, correcting nutrient deficiencies, and physician recommendations. On the regulatory side, the Saudi Food and Drug Authority (SFDA) plays a critical role in ensuring product safety and compliance. All dietary supplements and energy drinks must be registered through the FDA's unified portal, supported by documentation on composition, labeling, GMP certification, and product stability.

Saudi Arabia Nutraceuticals Market Report Segmentation

This report forecasts revenue growth at the country level and provides an analysis of the latest industry trends in each of the sub-segments from 2021 to 2033. For this study, Grand View Research has segmented the Saudi Arabia nutraceuticals industry report based on product, application, and distribution channel:
