### Self-expanding Covered Stents Market Summary

The global self-expanding covered stents market size was estimated at USD 743.8 million in 2025 and is projected to reach USD 1,091.7 million by 2033, growing at a CAGR of 5.0% from 2026 to 2033. The increasing prevalence of peripheral artery disease and aortoiliac occlusive disease, rising incidence of Aneurysm, are driving the demand for effective vascular interventions, thereby boosting the adoption of self-expanding covered stents.

The section below outlines the key factors driving the growth of the self-expanding covered stents (SX-CS) market, highlighting the rising prevalence of peripheral artery disease and aortoiliac occlusive disease, along with the increasing demand for minimally invasive vascular interventions. It also examines the role of technological advancements, such as Nitinol-based stent designs and improved Polytetrafluoroethylene coverings, as well as the expanding use of SX-CS in complex procedures, including Endovascular Aneurysm Repair, Fenestrated Endovascular Aneurysm Repair, and Branched Endovascular Aneurysm Repair, thereby strengthening their adoption across healthcare settings.

Rising prevalence of peripheral vascular diseases

The increasing incidence of Peripheral Artery Disease and Aortoiliac Occlusive Disease is driving demand for durable and flexible stent solutions. SX-CS is widely preferred due to its ability to provide long-term patency and vessel support in complex lesions. In May 2024, the Centers for Disease Control and Prevention highlighted that PAD affects millions of adults in the U.S., significantly increasing the need for endovascular interventions.
