Server Operating System Market Growth & Trends

The global server operating system market size is anticipated to reach USD 36.3 billion by 2030, according to a new report by Grand View Research, Inc. The market is expected to expand at a CAGR of 8.5% from 2022 to 2030. The market is expected to grow due to the increasing number of cloud-native server users and the increase in enterprise spending on adopting cloud services. Companies in the market are launching cloud-native applications for evaluating web-based applications that store data on a remote server. In addition, the increasing adoption of Linux-based operating systems, coupled with the surge in enterprise server deployments, is anticipated to stimulate market growth.

The industry is anticipated to grow and gain momentum in the coming years. Several businesses have adopted new strategies such as business expansion, diversification, and new product launches to assist businesses with their operations. In January 2022, Amazon Web Services introduced a new speed, 65% faster performance, with an optimization solution for Microsoft Windows Server on Amazon Elastic Compute Cloud (EC2) speed on EC2 while reducing the likelihood of costly delays.
