Skin Antiseptic Product Market Growth & Trends

The global skin antiseptic product market size is expected to reach USD 478.35 million by 2030, registering a CAGR of 6.9%, according to a new report by Grand View Research, Inc. Rising incidences of Hospital-Acquired Infections (HAIs) and increasing usage of surgical units and endoscope reprocesses are the key driving factors for the market. The rising number of surgeries being performed is also expected to drive the market during the forecast period. According to the Agency for Healthcare Research and Quality (AHRQ), 17.2 million hospital visits included surgical procedures in the U.S. in 2014.

Demand for alcohol antiseptics for pre-injection and pre-operative skin preparations is increasing significantly. In addition, alcohol antiseptics are being used as a base along with various formulations, such as iodine and chlorhexidine. Exceptional properties of alcohol-based antiseptics for surgical purposes are driving the market. Growing awareness regarding the benefits of skin antiseptic products and increasing R&D funding are creating opportunities for market entrants. Moreover, various programs being conducted by manufacturers and governments to boost the awareness about the importance of using skin antiseptic products are also expected to contribute significantly to the skin antiseptic product market growth.

Skin Antiseptic Product Market Report Highlights
