### **Smoke Evacuation Systems Market Growth & Trends**

The global smoke evacuation systems market size is expected to reach USD 285.5 million by 2028, according to a new report by Grand View Research, Inc. The market is expected to expand at a CAGR of 7.4% from 2021 to 2028. Factors contributing to the growth of this market include an increase in medical tourism for cosmetic surgeries, electrosurgery procedures, and increased product availability.

Currently, elective and endoscopic procedures are delayed due to the outbreak of COVID-19 to reduce the risk of transmission to other patients with chronic conditions. According to the Society of American Gastrointestinal and Endoscopic Surgeons, it is recommended to use electrosurgery pencils with attached smoke evacuators instead of monopolar electrosurgical and advanced bipolar devices and ultrasonic dissectors. Moreover, high-flow vacuum sources or filtration units are recommended during laparoscopic procedures. The market is thus anticipated to experience gradual growth post-COVID-19 revival.

The rising adoption of minimally invasive surgeries owing to their benefits such as shorter hospital stays, quick healing, and fewer surgical incisions, is also expected to boost the market growth during the forecast period, as high-flow vacuum sources are

used in a majority of minimally invasive surgeries. This is further supported by increasing technological advancements by market players, the prevalence of chronic diseases that require surgical procedures, and the demand for better surgical equipment.

Major market players are focused on launching technologically upgraded products in the market to enhance their presence. For instance, in January 2020, Symmetry Surgical Inc. acquired the O.R. Company that manufactures, develops and markets, innovative & high-quality surgical devices.

### Smoke Evacuation Systems Market Report Highlights
