Abstracts

The global sodium hydrosulfite market size was valued at USD 1.5 billion in 2025 and is projected to grow from USD 1.6 billion in 2026 to USD 2.1 billion by 2033, growing at a CAGR of 4.0% from 2026 to 2033. Asia Pacific dominated the market, accounting for the largest global share of 55.9% in 2025. Market growth is supported by the continued expansion of textile manufacturing and downstream processing activities worldwide.

Sodium hydrosulfite serves as a reducing and bleaching agent in vat and sulfur dyeing, color stripping, and fabric treatment processes. Increasing textile production capacity, particularly in major Asian manufacturing hubs, is driving broader consumption of sodium hydrosulfite in textile processing. The growing production of paper and pulp products is driving demand for sodium hydrosulfite, particularly in mechanical pulp bleaching applications. The chemical is used to improve pulp brightness while helping maintain pulp yield and quality. Increasing demand for packaging, printing, publishing, and specialty paper products is driving growth across the pulp and paper industry.

Market Dynamics

The global market is shaped by sustained demand from textile processing, paper & pulp manufacturing, water treatment, and chemical processing industries. Expansion of textile and paper production, particularly across Asia-Pacific, continues to support

consumption, while demand for efficient reducing and bleaching agents creates opportunities across industrial applications. However, fluctuations in raw material prices, energy costs, stringent environmental regulations, and supply chain disruptions can affect production economics and product pricing. Overall, market growth is supported by expanding industrial activity and increasing adoption of sodium hydrosulfite in applications requiring effective reducing and bleaching performance.
